Combining the benefits of PEMF with the knowledge about the electrical properties of acupuncture meridians may enhance acupuncture's effects.

According to TCM (traditional Chinese medicine) theory, many health problems can be attributed to blockages of qi (life-force) flow through these meridians. Along these meridians are acupuncture points with lowered electrical resistance which are the best places to stimulate the meridians to unblock them.

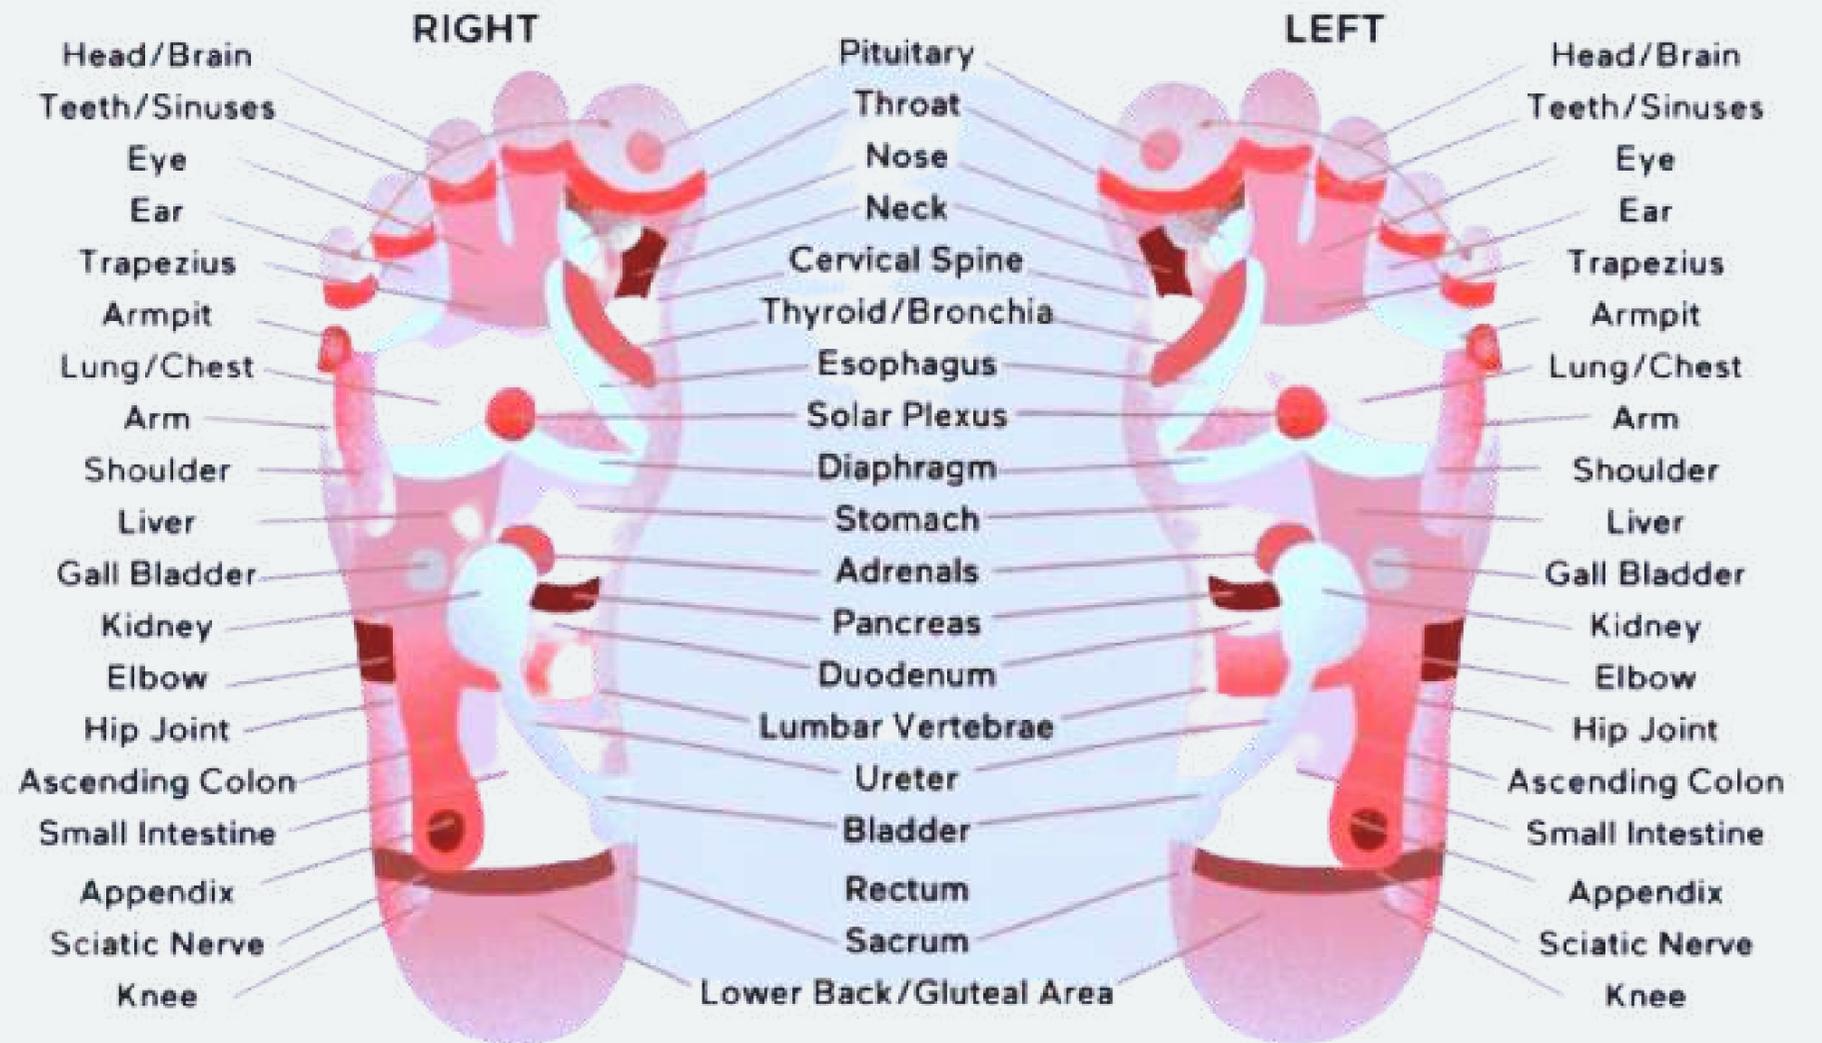

While traditional acupuncture uses needles, heat (moxibustion) or pressure (acupressure or massage), Vigo uses electrical current, magnetic field, electrostatic potential as stimulators.

Under the feet

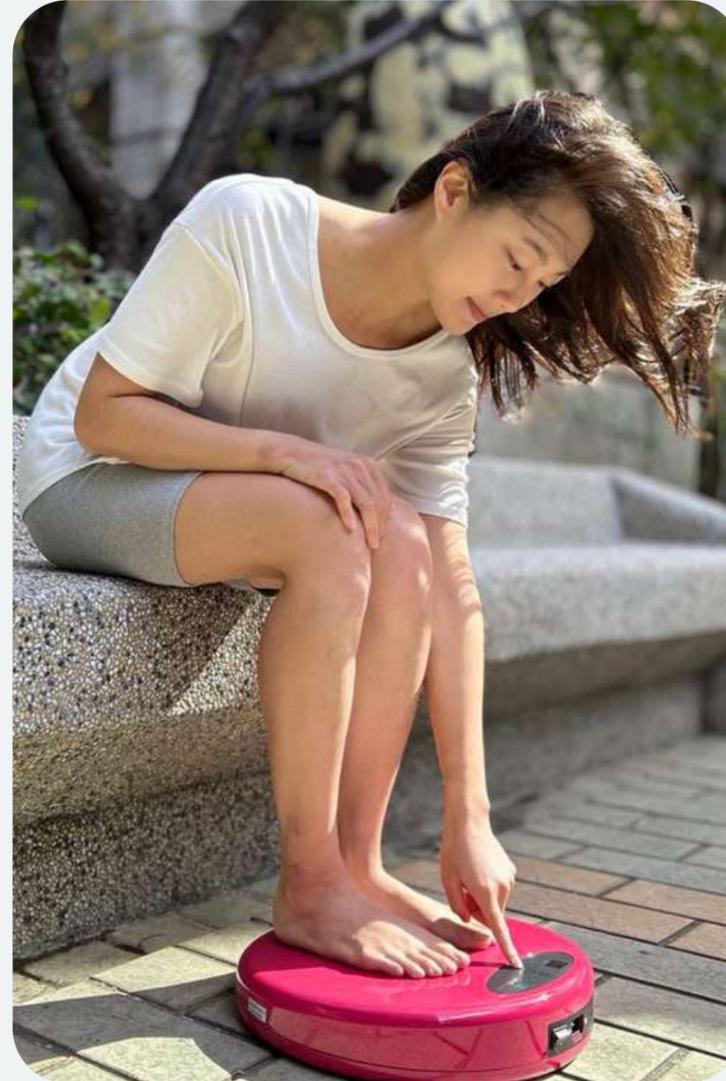

Foot reflexpoints correspond to different organs, and body parts. Stimulating these points has a positive effect on those specific areas, and on your overall well-being.

Behind your back

Stimulates the nervous system to release chemicals in the muscles, spinal cord, and brain, including endorphins, enkephalin (a type of endorphin) and other neurochemicals.

These natural chemicals may either change the pain experience or trigger the release of other chemicals and hormones that influence the body's own internal regulating system.

This can bring about a normalizing effect on neuroendocrine (nerve and hormone) function. The improved energy and biochemical balance results in facilitating the body's natural healing abilities, and in promoting physical and emotional well-being.
